

CAREER OBJECTIVE

Passionate and driven Computer Science student with strong problem-solving abilities and a keen interest in software development, ready to contribute effectively to innovative projects and thrive in a professional environment.

WORK EXPERIENCE

Python Development • Internship Jun 2025 - Jul 2025
HCST, Agra

- Built an Airline Reservation and Management System as part of a college summer internship, enabling flight search, booking, and passenger management with database integration.
- Designed core modules including flight scheduling, seat allocation, and ticket booking to simulate real world airline operations.
- Implemented user authentication and role-based access for admin and users to ensure secure system control.
- Gained hands on experience in full stack development, database design, and system workflow implementation.

EDUCATION

B.Tech, Computer Science & Engineering 2024 - 2028
Hindustan College Of Science And Technology

PROJECTS

[AI Travel Itinerary & Maths Tutor Assistant ↗](#)
Apr 2026

- Developed a Python based AI assistant using OpenAI API that combines a travel itinerary planner and a mathematics tutor. The system uses prompt engineering and conversation history to generate context-aware responses for both travel planning and educational assistance.
- The travel assistant suggests personalized itineraries based on user input, while the maths tutor helps solve and explain mathematical problems interactively.

[Hostel Management System ↗](#)
Jan 2026 - Feb 2026

- Developed a Hostel Management System to manage student records, room allocation, and basic hostel operations in a structured and efficient manner.
- The system allows storing, managing student details and tracking occupancy status to avoid conflicts in allocation.
- Implemented using Python with a structured data handling approach to ensure proper storage, retrieval, and management of hostel related information.

[Airline Reservation & Management System ↗](#)
Jun 2025 - Jul 2025

- Developed a backend based Airline Reservation System in Python that manages flight search, seat booking, and ticket management. The system simulates real world airline operations including seat availability tracking, user authentication using tokens, and structured booking workflows.
- The project is designed to handle flight data, passenger bookings, and seat allocation efficiently. It also includes concepts for fare management and future enhancements like dynamic pricing and connected flight search.

SKILLS

- Python
 - C Programming
 - HTML
 - Java
 - GitHub Copilot (GenAI)
- Django
 - SQL
 - CSS
 - JavaScript
 - GitHub
- Django Rest Framework
 - REST API
 - Data Structures
 - Software Testing

EXTRA CURRICULAR ACTIVITIES

- Participated in 2 group discussion events, 3 dramas, where I took part in stage performances and discussions.
- Led a team in 1 hackathon project, where I coordinated task distribution among 6 team members, discussed solution approaches, and ensured timely completion of the problem statement.
- Participated in 3 competitive programming contests, where I secured a top 5 rank in each contest by solving real world problem statements under time constraints

ADDITIONAL DETAILS

- Attended a 3 day CyberDojo Cyber Security Workshop covering cybersecurity fundamentals and security awareness.
- Participated in a 10 day Generative AI workshop focused on AI concepts, prompt engineering, Python-based AI applications.
